

COLOMBO

*Global Network
Pneumatic Tube Systems*

50 years of delivering results

Colombo Sales & Engineering was the first company to work with Healthcare Organizations to show that pneumatic tube systems are a critical link for the transport of Blood Specimens and Pharmaceuticals in a reliable, timely, and safe manner.

WHY USE A HOSPITAL WIDE SYSTEM

Global Network Systems are the staple of healthcare specimen and pharmaceutical transport. Available in 4" and 6", they're characterized by their ability to send and receive to any other pneumatic station on the system, connecting entire and multiple facilities. Whether you're floors apart or buildings away, items can be safely transported to their destination at 24 feet per second.

Controlled by a standalone PC computer system, housing the TUBES 5 software package, our global system now provides unprecedented features and security.

- Provides quick turn-around times for time sensitive materials
- Keeps highly trained staff working with patients, not transporting material
- Reduces the possibility of spreading disease through a hospital from moving bio-hazardous material
- Reduces the possibility of product loss
- Tracks items from start to finish
- Drastically reduces wear and tear on elevators used to transport items

FEATURES AND BENEFITS

- Easy to use computer controls
- User friendly 10" color touch screen panels
- STAT transactions
- Auto-returns
- Secure transactions
- Built-in administration and maintenance features
- Transaction logging and carrier tracking

OPTIONAL FEATURES

- Proximity card readers
- Biometric Security (thumb print access)
- Preventative Maintenance plans to keep your system operating like new

WHAT ARE YOUR OPTIONS?

Pay a company to install a system and pay them software licensing fees to use the system.

-or-

Choose a Colombo System and use the equipment you paid for, without annual software fees.

Take a chance paying a company to install your pneumatic tube system that does not specialize in them.

-or-

Let Colombo install their state-of-the-art systems, using their skilled labor force, factory trained technicians and complete engineering staff.

QUICK, COST EFFECTIVE AND SECURE

- Provides a single tube, computerized, pneumatic tube system with digital controls and 10" touch-screen operation
- Recessed stations in convenient locations
- Card readers provide safeguards, including chain-of-custody and accountability for sensitive items like biopsies and controlled substances
- Biometric security ensures sensitive items don't end up in the wrong hands

GLOBAL NETWORK SYSTEMS

- Reduce turn-around-time
- Reduce product loss
- Track and document all transactions
- User confidence at a lower cost
- State-of-the-art functionality
- Preventative Maintenance contracts availability
- A trusted name in quality products and service for five decades
